DR. ANDRE SAADOUN

An internationally renowned lecturer in Periodontology and Implantology and faculty member of the gIDE Institute, Dr. Saadoun has written over 150 articles and several book chapters. He is a contributor in the books entitled: *The Art of the Smile* and *The Art of Treatment Planning*. He is also Associate Editor of *Implant Site Development* to be published in 2010. He was Associate Professor in the Department of Periodontics at the University of Southern California and is also Visiting Professor at the Hadassah, Faculty of Dental Medicine of Jerusalem University. Dr. Saadoun maintains a private practice in Paris, France which is limited to Esthetic Periodontology and Implant Surgery.

CONTENT

Chapter 1: Crown Lengthening

Chapter 2: Root Coverage

A major evolution in periodontology has taken place with less invasive surgery and more sophisticated approaches.

The predictability of the different therapeutic modalities and the long-term prognosis involve a scientific approach in all clinical procedures using one or several delicate osseous and/or muco-gingival plastic surgeries.

LEARNING OBJECTIVES

- Recognize that a harmonious smile does not just come from beautiful lips, but also from a perfectly healthy gingival frame and well-aligned, healthy, natural teeth.
- Understand why gingival recession is a serious concern both functionally and esthetically.
- Learn to increase the axial length of the crown by surgically moving the marginal gingiva and/or alveolar crest bone to a more apical position.
- Become familiar with the multifactorial etiologies of gingival recession.
- Learn the different procedures to treat gingival recession, involving flap elevation and tunneling technique.
